## **Company overview**

A nonprofit organization which was created in October 2006, the Trauma Resource Institute (TRI) works to build resilient, trauma-informed people and communities around all over the world. TRI is well-known throughout the world for its creative perspectives that support the well being of both individuals and communities. The main objective of TRI was to provide biological treatment to the people who are guided by physiological and psychological consequences

The Trauma Resiliency Model (TRM) and the Community Resiliency Model (CRM) are two training programs that have been created by the organization. These scientifically grounded frameworks promote mental, physical, and spiritual well-being. CRM adopts a public health focus and has been taught to professionals and natural community leaders, whereas TRM is focused on mental health experts.

## **Company Missions/Vision**

### **Vision**

To see a society in which people and groups fully accept their common humanity and are given the resources they need to develop their underlying resilience.

### **Mission**

A worldwide nonprofit organization that uses innovative techniques and ideas based on neuroscience and body awareness to uplift and empower people all over the world.

Trains people in a community across all age groups in skill-based activities that are easily available, reasonably priced, flexible, and easily transported, which promotes both individual and systemic transformation.

Recognizing the deep understanding present in the beautifully diverse human family, TRI develops professionals as well as natural leaders.

## **Core Competencies**

The core competencies that were observed here are below

- Unique services such as TRM and CRM
- Cultural adaptability
- Premium quality training and service
- Commitment to Research

## **Business Objectives and Project Objectives**

### **Business Objectives**

- Increase brand awareness and Sales
- Increase Conversion rate of TRM and CRM trainings
- Boost Digital Engagement and App Adoption
- Enhance Accessibility to Trauma Support Services

### **Project Objectives**

- *Paid Search Ads*- Increase reach of TRI using \$10,000 grant from Google
- *Mobile Application*- Increase awareness about CRM and TRM trainings Increase downloads of iChill app through advertisements

## **Chapter 1: Company Background**

### **- Current Target Markets and Positioning**

Current target markets for the services TRI provides are as follows:-

#### **CRM**

First responders, medical professionals (nurses), educational institutions, and innate community leaders, such as religious leaders, educators, and community activists.

#### **TRM**

Medical professionals, behavioral health specialists, community organizations, advocates/activists, educators/researchers in the topic of trauma, and caretakers for trauma survivors.

### **- Products**

#### **CRM**

#### **CRM workshops**

The six wellness skills of CRM are introduced in CRM workshops. These abilities are intended to help adults and children learn how to monitor their own nerve systems in order to restore greater balance to their bodies, minds, and spirits. Additionally, they urge people to share these skills with their friends, family, and the community at large.

## **CRM Teacher training program**

Mental health services are insufficient and even lacking worldwide. The quantity of individuals experiencing depression and traumatic stress reactions just cannot be met by the amount of qualified professionals. Furthermore, many people who are suffering are not psychologically oriented, and if they do seek assistance, they are more likely to turn to a friend or relative than a professional therapist.

In order to provide resiliency training to a larger population and build capacity in local communities, the Community Resiliency Model (CRM) Teacher Training program aims to assist professionals and community members in learning how to teach CRM skills to people in their own community. Globally, communities are being encouraged to offer their different cultural perspectives to boost the effectiveness of the CRM skills.

## **TRM**

### **TRM Level 1**

A three-day training called Trauma Resiliency Model (TRM) Level 1 is aimed at providing professionals who work with children and adults who have traumatic stress reactions with new abilities. TRM investigates the biology of threat and fear as well as the instinctive, natural defense reactions that take place in dangerous or life-threatening circumstances. Above all, this model examines the idea of resilience and how to reestablish stability between the mind and body following traumatic events. A change in perspective occurs when normal biological reactions to extraordinary occurrences become more prominent and symptoms are no longer seen as abnormal or mental weakness. It is believed that symptoms represent the body's attempt in the healing process.

### **TRM Level 2**

The Trauma Resiliency Model Level 2 program examines the idea of resilience and how to bring the body and mind back into balance following stressful or traumatic experiences. The skills from Level 1 training are reviewed in Level 2 training, which also goes into greater detail on applying attachment theories to TRM and working with trauma reprocessing with survival responses. The SENSIMAP is used to investigate implicit memories in more depth. Furthermore, the program will incorporate arts that are expressive to showcase greater applications of TRM abilities.

### **- Pricing**

The pricing of the services that they are providing are planned very strategically.

## Pricing for CRM product

| Products                     | Early Bird Price | Normal Price |
|------------------------------|------------------|--------------|
| CRM Workshops                | \$1950           | \$2050       |
| CRM Teacher Training Program | \$1950           | \$2050       |

## Pricing for TRM product

| Products    | Normal Price |
|-------------|--------------|
| TRM Level 1 | \$ 950       |
| TRM Level 2 | \$ 950       |

## Analysis

TRI should focus more on early bird prices. The reason being here is that people who are price sensitive tend to register early and this way there will be cash flow for the TRI. TRM does not have early bird prices, here they should have one so that the target market for TRM can enroll for it.

Price has always been a sensitive element. Having the right control for the same is very essential for a company.

## Marketing Channels

Marketing channels play an important role for TRI. With the absence of marketing channels people can barely know about the services that they provide. The major marketing channels that TRI uses are Email Marketing, social Media, App, and Website.

## Integrated Marketing Communications

IMC is a very important thing for the company to follow. The reason being here is that all the communications efforts done by the company should be aligned with each other. An unified message is a must thing as the company doesn't want their audience to mislead or overburden with the information advertisement in different platforms.

There are several IMC that TRI is using to reach their audience. They are as follows:-

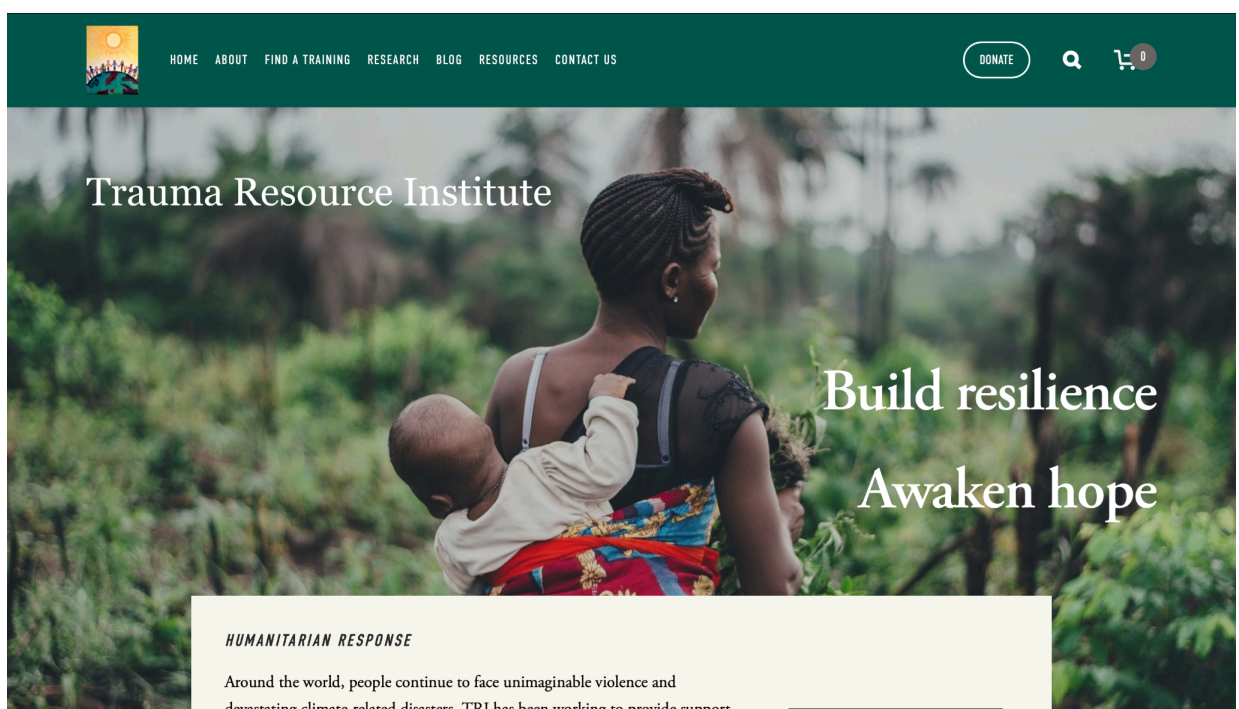

## Website

The registration steps that they have simplified for the users is a plus point for them. The colors, fonts, and pictures play a great role in capturing the attention of the user. All the buttons are crystal clear. After adding the training cart has been placed perfectly near the search bar. The overall design is easy to navigate

For users the search bar which is placed on the top right corner helps the people find specific content.

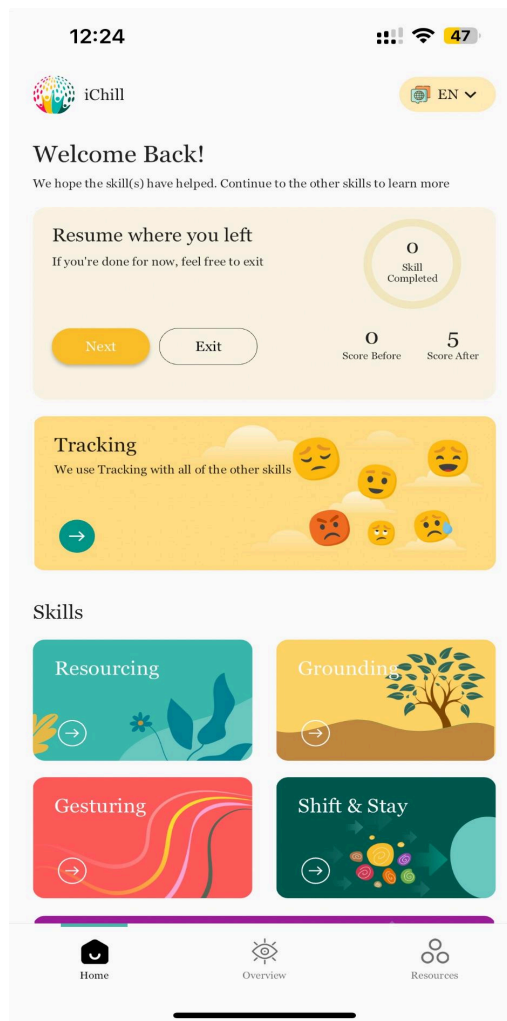

Donation button has a similar color as the website (green). This makes the user ignore that button. It is most important that the donation button should be highlighted with a different color so that people can easily observe it, which will ultimately lead to some contribution by the users.

## Mobile Application

### Overview of the home page and application

The home page seems decent. The color combinations they have used are magnificent as they help distinguish different pieces of information shown. They have upgraded to more languages from 3 languages to 5 Languages. There is barely anything mentioned about the training (CRM and TRM). Home, Overview, and Resources buttons are clear to navigate. Content related to TRM and CRM should be involved in the home page.

## Social Media

Social media is a very powerful platform these days. Any information given here plays a vital role in building brand value. Following lists in every social media plays a role. Knowing the target audience for each social media platform and posting relevant content on every social media platform is very crucial.

**Facebook** - 6.5k followers

**Instagram** - 2,816 followers

**LinkedIn** - 1k followers

It was observed that the followers for LinkedIn and Facebook have consistent followers. In other words we can say that there was no growth in the followers for these social media platforms. Instagram still showed growth in the followers but, the change in number was not drastic. Here we can recommend to focus more on Instagram as they have not reached close enough to the followers of the other social media listed. As the attention span is very low for people it is recommended that they should start creating reels instead of long videos.

## Email

- They are circulating newsletters quarterly and annually summarizing the work of TRI.
- The emails that they send provide follow up information for the trainees and about the post training as well.
- Emails that they send advertise about the events and training that are upcoming in weeks and months.

## Chapter 2: Assessment of Company's Current Digital Marketing Practice

### Google Ads

The Trauma Resource Institute (TRI) is currently not running any Google Ads campaigns. However, they have applied for the **Google Ads Grant**, which provides eligible nonprofits with \$10,000 per month in ad credits to promote their initiatives on Google's advertising platform. This grant could significantly enhance TRI's digital marketing efforts by increasing visibility and driving traffic to their website and programs.

As of now, the application process for the Google Ads Grant is still pending, and TRI is awaiting approval to leverage this opportunity for their digital marketing strategy. Once approved, this grant could be utilized to promote the TRM (Trauma Resiliency Model) and CRM (Community Resiliency Model) training programs, build brand awareness, and encourage app downloads and user engagement.

### Mobile Applications

For the Trauma Resource Institute, they have a mobile application called iChill. With the current state of the iChill app, it does not promote anything about the Trauma Resource Institute website. Nor does it promote the TRM or CRM training programs Trauma Resource Institute wants to promote more of. According to the iChill app, it focuses on teaching the user of the app six skills that the training will focus on. Consider

it giving the user a taste of what to expect when they prepare for the programs Trauma Resource Institute provides. The other parts of the mobile application provide an overview of Trauma Resource Institute, the overview page provides a hefty reading to inform the audience about the iChill app. Finally, they have another part called resources which allows the users to create notes on the skills they have learned in the app. Having a mobile application is a good start for the Trauma Resource Institute.

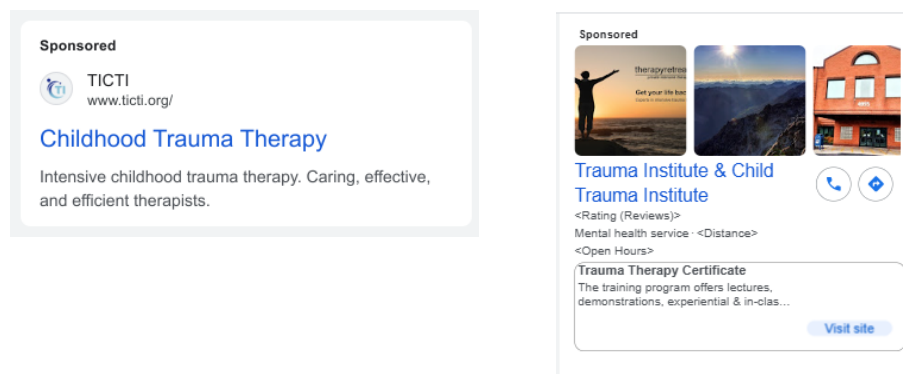

## Chapter 3: Competitive Analysis

### Google Ads

The **Trauma Resource Institute (TRI)** is entering the digital advertising space with the Google Ads Grant. However, the competitive landscape indicates several active players in the field of trauma and resiliency services, each leveraging Google Ads to reach their audience effectively. Below is a detailed analysis:

**Competitors:** (Source: Google Transparency Center)

#### 1. Trauma Institute & Child Trauma Institute

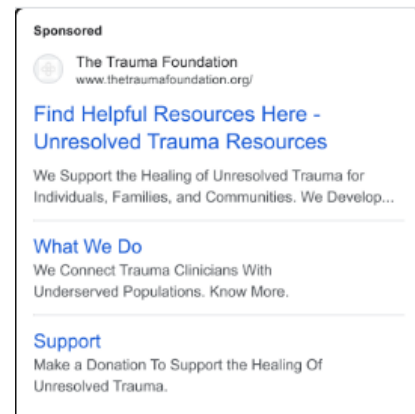

- Actively uses Google Ads to promote services such as **Childhood Trauma Therapy** and **Intensive Grief Therapy**.
- Ads are designed with specific calls to action, such as visiting the website for more information or contacting therapists, creating a direct pathway for potential clients.
- Their focus is on targeted keywords like “child trauma therapy” and “grief therapy,” which are highly relevant to TRI's potential audience.

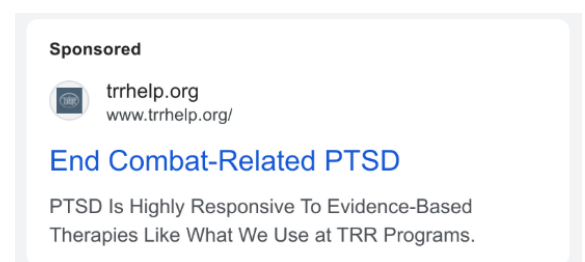

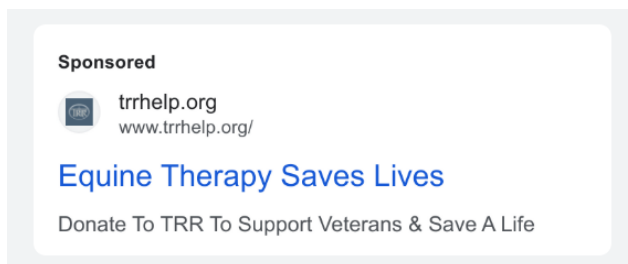

#### 2. The Trauma Foundation

- Uses Google Ads to promote **Unresolved Trauma Resources** and **Foundation for Trauma Recovery**.

- Their ads emphasize support for individuals, families, and communities, with a strong focus on healing unresolved trauma.
- Keywords like “trauma recovery foundation” and “trauma resources” are central to their campaigns, presenting direct competition for TRI in search rankings.

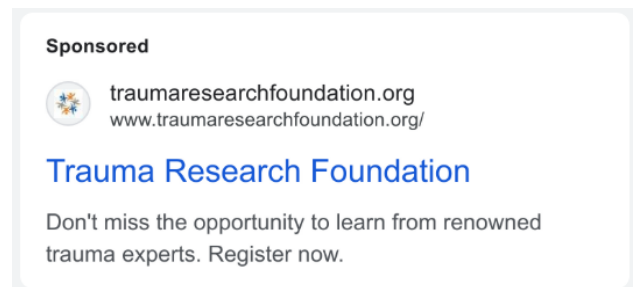

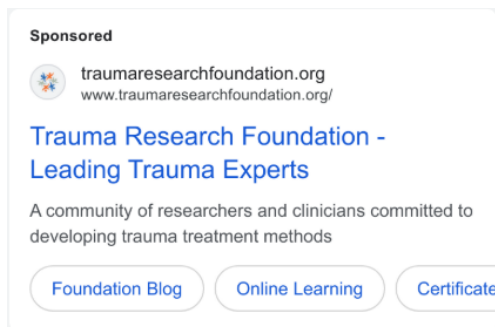

### 3. Trauma and Resiliency Resources Inc

- Employs Google Ads to highlight specific services such as **Equine Therapy for Veterans, End Combat-Related PTSD, and Moral Injury Support.**
- The ads are clearly geared toward veterans and those dealing with combat-related PTSD, leveraging niche keywords to attract a focused audience.
- Their campaign strategy effectively combines emotional appeal with actionable insights, such as donating to support their programs.

#### 4. Trauma Research Foundation

- Promotes its unique offerings like **7-Month Programs with Leading Trauma Experts** and certifications in trauma treatment.
- Their Google Ads campaigns are focused on educational programs, targeting professionals in the field of trauma therapy and resiliency training.
- The foundation highlights prominent experts like Dr. Bessel van der Kolk to enhance credibility and attract professionals seeking advanced training.

## Mobile Application

For the competitive analysis Trauma Resource Institute has tons of competitors, however, it is best to focus on The Garrison Institute and Driven Resilience. The reason is because these companies have a mobile application already.

First, the Garrison Institute their mobile application is called “Care for Caregivers” a free mobile application, available on both Apples’ App Store and Googles’ Google Play. According to the Garrison Institute, “This app empowers caregivers with the essential practices of the CBR approach.” Their approach to the mobile application is similar to Trauma Resource Institute by teaching the user of the mobile application about the essential skills that are taught in their prospective programs.

Next, we have Driven Resilience mobile application called “The Driven Resilience App’ available for free on the Apples’ App Store and Googles’ Google Play as well. According to Driven Resilience, “The Driven Resilience App is the virtual coach in your pocket. Providing training across the PR6 model, it strengthens learning through ongoing interaction, while enabling broader population health improvement.” Both mobile applications focus on building their brand and with the objective of promoting their own training in the mobile application.

Overall, Trauma Resource Institute has strong competitors in this market channel for mobile applications, however, by making improvements to their mobile application they can be just as strong in the market channel too.

**Comparative table for mobile application**

| <b>Competitor</b>             | <b>Mobile Application</b> | <b>Availability</b>          | <b>Description</b>                                                                                                                                                                                                  | <b>Focus</b>                                       |

## Chapter 4: Customer Analysis

### 1. Customer Segments

TRI's services cater to a diverse audience, including professionals, community leaders, and individual users. These can be segmented as follows:

#### A. Mental Health and Medical Professionals

- **Who they are:** Psychologists, therapists, counselors, nurses, behavioral health specialists, and social workers.
- **Needs and Pain Points:**
  - Need for innovative trauma recovery methods to support patients.
  - Desire for professional development and evidence-based tools.
  - Lack of sufficient training on community-based trauma recovery.
- **How TRI meets their needs:** The **TRM** training provides tools grounded in neuroscience to address trauma and resilience, enhancing their professional practice.

#### B. Community Leaders and Educators

- **Who they are:** Religious leaders, teachers, school counselors, community activists, and nonprofit workers.
- **Needs and Pain Points:**
  - Need accessible tools to address trauma within their communities.
  - Require affordable, easy-to-learn frameworks to educate and support others.
- **How TRI meets their needs:** The **CRM** program is adaptable to diverse community settings and provides leaders with practical skills to teach others.

### C. Individuals Seeking Trauma Support

- **Who they are:** Trauma survivors, caregivers, and individuals interested in personal growth and resilience.
- **Needs and Pain Points:**
  - Require easy-to-access resources for trauma recovery.
  - Desire for self-paced tools to address emotional challenges.
- **How TRI meets their needs:** The **iChill app** provides an entry point to TRI's resilience-building techniques and serves as a self-help tool.

### D. Veterans and First Responders

- **Who they are:** Military personnel, veterans, firefighters, police officers, and emergency medical responders.
- **Needs and Pain Points:**
  - Struggle with PTSD and work-related trauma.
  - Seek effective, scalable solutions for stress management and trauma recovery.
- **How TRI meets their needs:** Both **TRM** and **CRM** programs provide evidence-based models to manage trauma and build resilience in high-stress professions.

### E. Global Communities and Underserved Populations

- **Who they are:** Residents in rural or underserved areas, especially in regions with limited access to mental health services.
- **Needs and Pain Points:**
  - Lack access to traditional therapy and mental health professionals.
  - Require community-based solutions that are affordable and culturally adaptable.
- **How TRI meets their needs:** The **CRM** program equips community leaders to teach resilience skills and offers scalable solutions for larger populations.

**Table for customer segment**

| Customer Segment                               | Who They Are                                       | Needs/Pain Points                                                | How TRI Meets Their Needs                                |
|------------------------------------------------|----------------------------------------------------|------------------------------------------------------------------|----------------------------------------------------------|
| <b>Mental Health and Medical Professionals</b> | Psychologists, therapists, nurses, social workers. | Need innovative methods, professional development, and training. | TRM offers neuroscience-based tools to enhance practice. |

|                                                       |                                                                |                                                                   |                                                                       |
|-------------------------------------------------------|----------------------------------------------------------------|-------------------------------------------------------------------|-----------------------------------------------------------------------|
| <b>Community Leaders and Educators</b>                | Religious leaders, teachers, counselors, activists.            | Need affordable, accessible frameworks for trauma support.        | CRM provides practical, adaptable community-based skills.             |
| <b>Individuals Seeking Trauma Support</b>             | Trauma survivors, caregivers, individuals.                     | Need self-paced, accessible recovery resources.                   | iChill app offers resilience-building techniques and self-help tools. |
| <b>Veterans and First Responders</b>                  | Military personnel, firefighters, police, EMTs.                | Struggle with PTSD, need scalable stress recovery tools.          | TRM and CRM provide evidence-based trauma and resilience models.      |
| <b>Global Communities and Underserved Populations</b> | Rural/underserved residents with limited mental health access. | Need affordable, culturally adaptable, community-based solutions. | CRM equips leaders to teach resilience, offering scalable solutions.  |

## 2. Customer Behavior and Preferences

- Behavior:
  - Mental health professionals and educators seek structured, science-backed training programs.
  - Individuals often explore free or low-cost resources like mobile apps before committing to full programs.
  - Community leaders value accessible, practical tools they can immediately implement in their communities.
  - Veterans and first responders prioritize solutions that are straightforward, credible, and require minimal time investment.
- Preferences:
  - Customers prefer flexible training formats (online, in-person, or hybrid).
  - They value programs that emphasize real-world applications and measurable outcomes.
  - A significant portion of TRI's customers appreciates culturally adaptable frameworks.

## 3. Customer Pain Points

- High costs of traditional trauma therapy and training.
- Limited access to resources in rural or underserved areas.
- Lack of time or availability to participate in lengthy training programs.
- Hesitation to adopt new tools without clear evidence of their effectiveness.

## 4. Customer Journey

### A. Awareness Stage:

- Customers discover TRI through Google Ads, the iChill app, social media, or word-of-mouth recommendations.
- At this stage, they look for introductory information on TRI's programs.

### B. Consideration Stage:

- Customers explore TRI's website, learn about the TRM and CRM models, and review testimonials or case studies.
- They may download the iChill app to try TRI's techniques for free.

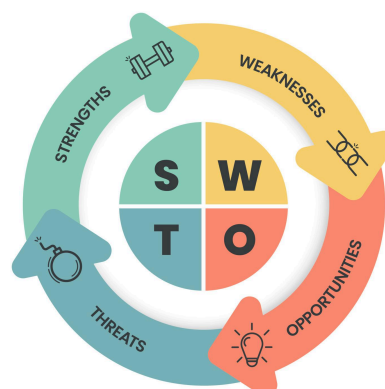

### C. Decision Stage:

- Customers enroll in a training program or recommend TRI's resources to their organization or community.
- Returning customers may participate in advanced training or refer others to TRI.

## 5. Insights

- TRI's emphasis on **affordable and accessible tools** positions it well to attract customers across various demographics.
- The organization's focus on community-based training is a strong differentiator, appealing to both individual customers and groups.
- Expanding digital marketing efforts through targeted Google Ads campaigns will help TRI connect with new customers, especially in underserved areas and among professionals.

## Chapter 5: SWOT

## Google Ads

### Strengths

1. **Google Ads Grant Approval:** TRI has secured the Google Ads Grant, providing \$10,000 per month in ad credits, allowing the organization to launch and maintain ads without financial strain.
2. **Opportunity to Target Niche Audiences:** Google Ads offers precise targeting based on keywords, demographics, and geography, enabling TRI to focus on audiences most likely to benefit from its **TRM (Trauma Resiliency Model)** and **CRM (Community Resiliency Model)** programs.
3. **Increased Online Visibility:** Running Google Ads will significantly improve TRI's visibility in search engine results, creating more opportunities for program enrollment, app downloads, and website traffic.
4. **First-Mover Advantage in Certain Areas:** While some competitors already use Google Ads, TRI's unique focus on resilience and community-based trauma training can help carve out a distinct niche.

### Weaknesses

1. **Delayed Setup:** TRI is still awaiting the completion of the no-billing account setup, which delays the ability to capitalize on the Google Ads Grant.
2. **Low Brand Recognition:** Compared to competitors such as the Trauma Research Foundation, TRI's relatively lower brand recognition may hinder initial ad performance until awareness is built.

### Opportunities

1. **Unexplored Keywords:** Many competitors focus on specific niches like grief therapy or PTSD support. TRI can explore keywords like "resiliency training," "trauma-informed community programs," and "neuroscience-based trauma recovery."
2. **Expanding Outreach Globally:** With Google Ads' global reach, TRI can target international markets where their **TRM** and **CRM** programs may have less competition.
3. **Reinforce the iChill App:** By promoting the iChill mobile application through Google Ads, TRI can drive downloads, increase app usage, and introduce users to their larger suite of services.
4. **Leveraging Ad Formats:** TRI can utilize diverse ad formats like responsive search ads and display ads to increase reach and engagement with potential clients.

### Threats

1. **Competitive Saturation:** Key competitors such as Trauma and Resiliency Resources Inc. and the Trauma Research Foundation already have active Google Ads campaigns, making the market highly competitive.

2. **High Cost-Per-Click (CPC):** Popular trauma-related keywords may have high CPC rates, potentially limiting the reach and effectiveness of TRI's campaigns within the grant budget.
3. **Algorithm Dependence:** Google Ads' performance heavily depends on algorithms, and changes in Google's policies or algorithms can affect campaign visibility and success.
4. **Competitor Adaptation:** Competitors may respond to TRI's entry into Google Ads by intensifying their own campaigns, reducing TRI's competitive edge.

## **Mobile Application**

### Strengths

Trauma Resource Institute has already developed a mobile application which puts them ahead of their competitors that do not have an app or will not bother developing the mobile application. The mobile application is free to download, creating the likelihood their customers will download the app. The app teaches the user a few skills that the user could possibly expect if they were to sign up for the CRM program.

### Weakness

At the current state of the mobile application, they fail to promote the TRM and CRM programs. Yes, they provide some skills, but they are not promoting the users to go to their website and sign up for the programs. Cost and time constraint can be a factor for Trauma Resource Institute, we were aware that they do not have a budget to run advertisements, and it is unknown how much they spend to run their mobile app as running a mobile application does cost money and requires someone to keep an eye on it to make sure it runs smoothly. Another weakness Trauma Resource Institute can run into is there is a low conversion rate. According to Dashthis.com they reported on average for Facebook advertisements have around 10% for conversion rate.

### Opportunity

The opportunity to promote the TRM and CRM program is important for Trauma Resource Institute. By promoting the programs in their mobile application, it will help build brand awareness and possibly word of mouth which is an important factor for helping businesses. Another important thing about updating the mobile application too. It shows the brand is being consistent with rolling out updates that can be beneficial for users of the mobile application.

### Threats

It is not unique, meaning the competitors that have a mobile application too can copy what Trauma Resource Institute is doing and implement the same plan onto their

application. Not to mention that there are already two other companies that have their own mobile application; Driven Resilience and The Garrison Institute who utilize their mobile application to promote their programs. Another threat is a user could uninstall the mobile application seeing that they have completed the skills in the mobile application and seeing there is nothing left for the user to do leading to them uninstalling the mobile application and not signing up for the TRM and/or CRM programs.

## **Chapter 6: Recommended Digital Marketing Strategy**

### **1. Target Market**

In our strategy, the **target market** for the Trauma Resource Institute (TRI) will be carefully defined to ensure that the digital marketing efforts, particularly through Google Ads, effectively reach the right audiences. Our target market will include a mix of professionals, community leaders, and individuals who would benefit most from TRI's **TRM (Trauma Resiliency Model)** and **CRM (Community Resiliency Model)** programs, as well as the **iChill app**.

#### **1. Professionals in the Mental Health and Medical Fields**

- **Target Audience:** Mental health professionals, medical professionals (nurses, social workers, behavioral health specialists), and educators who work with trauma survivors.
- **Why Target Them:** These professionals are directly involved in trauma recovery and could benefit from the **TRM** and **CRM** programs to enhance their practice. They are likely to seek scientifically backed, structured training programs.
- **Messaging Focus:** Emphasize the scientific foundation of TRI's programs, highlighting how the models can improve client care and personal professional development.

#### **2. Community Leaders and Educators**

- **Target Audience:** Religious leaders, community activists, educators, and natural community leaders who have influence and the ability to disseminate trauma-resilience knowledge within their communities.
- **Why Target Them:** TRI's **CRM** program, with its public health approach, is ideal for individuals in leadership positions within communities. These leaders can further train others and create long-term systemic changes.
- **Messaging Focus:** Promote the accessibility, flexibility, and cultural adaptability of the **CRM** model, showing its effectiveness in diverse community settings.

#### **3. Individuals Seeking Personal Trauma Support and Growth**

- **Target Audience:** Individuals who have experienced trauma or are looking to improve their mental and emotional resilience, including those seeking alternatives to traditional therapy.
- **Why Target Them:** TRI's **iChill app** offers a free introduction to trauma-resilience skills and serves as an accessible entry point for those who may not yet be ready to commit to formal training programs.
- **Messaging Focus:** Focus on personal empowerment through the iChill app, with messaging that emphasizes self-care and resilience, such as "Learn Trauma Resilience Skills at Your Own Pace."

#### 4. Underserved Communities

- **Target Audience:** People in rural or underserved areas where access to trauma support services is limited.
- **Why Target Them:** Many underserved communities lack access to trauma-informed care and training. **CRM**, with its focus on community leaders and natural helpers, is ideal for empowering local leaders to bring trauma resilience tools to these populations.
- **Messaging Focus:** Stress the affordability and accessibility of TRI's training programs, highlighting the ability to reach these communities where traditional therapy may be less available.

#### 5. Global Audience

- **Target Audience:** Global communities where there is an increasing demand for mental health services and trauma-informed care, especially in developing regions.
- **Why Target Them:** TRI's international reach through the **CRM** program allows for cultural adaptability, and its mobile app can cater to users in different languages.
- **Messaging Focus:** Emphasize the flexibility and cultural adaptability of TRI's services. Highlight how TRI's programs are scalable and can be taught by community leaders from diverse backgrounds.

#### 6. Veterans and First Responders

**Target Audience:** Veterans, active military personnel, first responders, and emergency medical teams who face high levels of trauma in their professional and personal lives.

**Why Target Them:** Programs like **TRM** and **CRM** can support trauma recovery and stress management among individuals in high-stress jobs.

**Messaging Focus:** Emphasize the healing power of TRI's trauma resilience models, particularly focusing on recovery and support for first responders and veterans.

## Positioning

For the positioning Trauma Resource Institute goal is to promote the TRM model for their company. Based on the information Trauma Resource Institute should position itself as a brand for clinical practitioners to gain hours they need to keep practising and be able to earn more skills that can be useful. With the use of the Google Ads and Mobile Application will be used to position them for the ideal target market to go with their product rather than go for a competitor's product.

## Google Ads

### Focus on Text-Based Google Ads Campaigns

Since the Google Ads Grant limits TRI to running text-only ads, the strategy we prioritize is crafting compelling and targeted text ads to maximize the effectiveness of this limitation.

#### 1. Defining Campaign Objectives

We will focus on three main objectives:

- **Increase Program Enrollments:** We aim to use text ads to promote the TRM (Trauma Resiliency Model) and CRM (Community Resiliency Model) programs by emphasizing their neuroscience-based approach and benefits.
- **Boost Website Traffic:** We will direct users to targeted landing pages that highlight TRI's services, workshops, and training programs.
- **Promote iChill App Downloads:** By crafting ads that showcase the value of the iChill app, we will encourage users to download and engage with it as an introductory tool to TRI's offerings.

#### 2. Keyword Research and Targeting

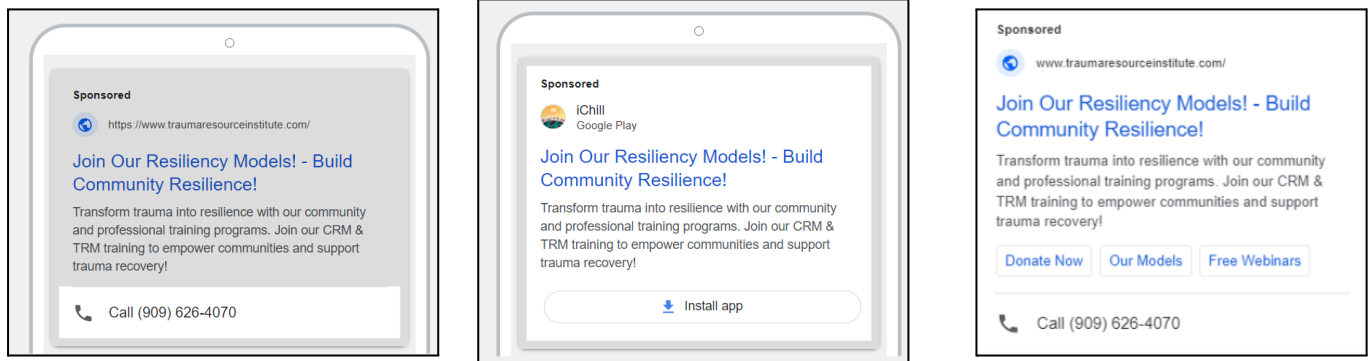

As a team, we have already conducted keyword research using the **Google Ads Keyword Planner** tool. The research helped us identify a comprehensive list of keywords that align with TRI's mission and audience interests. The results of our research are documented in this Google Sheet ([link to the keyword research](#)).

The finalized keywords are categorized as follows:

- **Educational Keywords:**
  - "trauma resilience training"
  - "mental health workshops"
  - "community resilience skills"
- **Solution-Oriented Keywords:**
  - "how to overcome trauma"
  - "trauma-informed therapy tools"
  - "learn coping skills for trauma"

- **Geographic Keywords:**
  - Keywords include location-specific terms to target underserved communities globally (e.g., "trauma support services in rural areas" or "community trauma training in [specific region]").

### 3. Creating Engaging Ad Copy

We will work together to craft concise and compelling text ads, keeping the audience's needs in mind:

- **Headline Examples:** “Build Resilience with Trauma Skills” or “Free Trauma Training Available.”
- **Descriptions:** Highlight TRI’s unique offerings. For example:
  - "Empower yourself with evidence-based trauma resiliency skills. Sign up today!"
  - "Join our neuroscience-backed programs to overcome trauma and thrive."
- **Call-to-Actions:** Each ad will include clear CTAs, such as “Learn More,” “Join Now,” or “Download the iChill App.”

We will also implement ad extensions like sitelinks and callout extensions to provide additional links to key resources or specific pages (e.g., training details, app information).

### 4. Structuring the Campaign

Our group will divide the campaigns based on TRI’s objectives:

- **Program Promotion Campaign:** Dedicated to TRM and CRM programs.
- **iChill App Campaign:** Focused on app downloads and engagement.
- **Awareness Campaign:** General ads to build TRI’s brand recognition and drive traffic.

We will further segment these campaigns into ad groups targeting specific demographics, interests, and geographic regions.

### 6. Monitoring and Optimization

We will regularly monitor the performance of our campaigns using Google Ads metrics:

- **Click-Through Rate (CTR):** To measure how well the ads capture attention.
- **Conversion Rate:** To track sign-ups, app downloads, and other goals.
- **Cost-Per-Click (CPC):** To ensure efficient use of the \$10,000 grant.

We will meet weekly to analyze performance data, adjust ad copy, refine keywords, and pause underperforming ads. This will ensure that we maximize the return on the grant.

## **Mobile Application**

For the mobile application we are looking to implement a new design to focus on the promotion of the TRM and CRM programs. How we plan to do this is by focusing on a redesign for the mobile application.

We believe it is best for Trauma Resource Institute to provide the program options in their own category. Furthermore, we plan to provide the benefits of signing up for the programs and putting a link to send them directly to sign up for that specific training.

The second objective is to keep them from uninstalling the application without at least seeing if they want to pursue the TRM and/or CRM program, we want to provide a survey asking them how they felt about learning the skills. This can help lead to people going to the Trauma Resource Institute website and possibly lead to a conversion.

The third objective, we want to implement is shortening up the overview tab in the mobile application. The original one is very long and wordy and can be hard to see as the user is using their phone to read. Shortening it up allows for the users to get a brief understanding of 'Who is Trauma Resource Institute?', 'What is iChill?' 'What is TRM?' and 'What is CRM?' keeping it simple is important for the reader to not turn away from the mobile application.

Finally, the last thing we would like to implement is changing the name of one of the tabs from "Resources" to "My Notes". This could help the user understand what the resource tab is used for.

## **Conclusion**

The Trauma Resource Institute (TRI) is well-positioned to enhance its digital marketing efforts through the strategic use of Google Ads and improvements to its mobile application, iChill. Securing the **Google Ads Grant**, which provides \$10,000 in monthly ad credits, offers TRI a significant opportunity to increase the visibility of its TRM and CRM programs, drive website traffic, and boost app downloads. With targeted keyword campaigns and compelling text ads, TRI can effectively reach its diverse audience segments, including mental health professionals, community leaders, and individuals seeking trauma support.

The iChill app, while a valuable tool for introducing users to TRI's techniques, currently underutilizes its potential for promoting TRI's broader training programs. By redesigning the app to highlight TRM and CRM, simplifying navigation, and encouraging user feedback through surveys, TRI can strengthen engagement and reduce uninstallation rates. These improvements will not only enhance user experience but also encourage conversions to TRI's paid programs.

Together, these initiatives—leveraging Google Ads and optimizing the iChill app—will significantly enhance TRI's digital presence, build brand awareness, and further its mission of creating resilient, trauma-informed communities worldwide. By addressing current gaps and capitalizing on opportunities, TRI can achieve measurable growth in both digital engagement and program participation.
